Notes: In Models (1) and (2), the *Post-sanctions Duration* variable is omitted from the second-stage estimation due to lack of variation. This is expected given the structure of the Heckman selection model, which estimates the second-stage equation only for observations where sanctions were ongoing. In this subsample, *Post-sanctions Duration* is always zero by construction, as the sanctions have not yet ended. Target and year fixed effects apply to both stages of the Heckman estimation. Robust standard errors are presented in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

Notes: In Models (1) and (2), the *Post-sanctions Duration* variable is omitted from the second-stage estimation due to lack of variation. This is expected given the structure of the Heckman selection model, which estimates the second-stage equation only for observations where sanctions were ongoing. In this subsample, *Post-sanctions Duration* is always zero by construction, as the sanctions have not yet ended. Target and year fixed effects apply to both stages of the Heckman estimation. Robust standard errors are presented in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
